Abstract (en)
[origin: EP0692218A1] The suction tool mouthpiece has a plastics base plate (1) with at least one U-shaped groove (10), parallel to the suction channel (2) for reception of a sealing rail (4). The base of the groove is provided with spaced openings (22), with the adjacent flanks (25) of the groove bent towards one another to form retaining sections (26) for the sealing rail. Pref. the elastic sealing rail has a fixing foot of similar cross-section to the reception groove, with a projecting sealing lip of reduced thickness extending beyond the plane defined by the edge of the suction channel. <IMAGE>
