Abstract (en)

[origin: EP0692420A1] The articulated vehicle has a spring mechanism (11,11',8') which is arranged between the running gear frame (7) and the two vehicle parts (1,2) supported by it. The spring mechanism is oriented to support and/or raise the thrust stiffness of the secondary springs in the roll direction of the running gear. Separate springs (11,11') with a horizontal force component are provided near the secondary springs (8). The secondary springs supporting the two vehicle parts may be set at an oblique angle.
