Abstract (en)
[origin: DE4425037C1] The spring elements (13) are formed as thrust springs. They have a parallelogram-shaped longitudinal section, when not under load, and are parallel to each other. When the lamellae (7,9) are in their closest position, the springs engage with their sides on the neighbouring lamellae. The spaces between the lamellae are covered at the top by sealing bodies (8). The top end faces of the springs are located directly below the sealing bodies. Each lamella is formed conventionally as a double T-profile.
