Abstract (en)
[origin: EP0692585A1] The shuttering element has an inner and outer hard foam wall with a certain number of wire cross bars (12) anchored between same. The cross bars adjoin the bottom of fixing gaps (14) which extend vertically from the upper and lower edges of the wall and open towards the inside of the wall. The arms (22) of the cross bars (12), which are angled at their ends parallel to the wall, are anchored in oblong holes (24) which extend parallel to the wall vertically in an extension of the fixing gaps. The wire cross bars can be U-shaped and arranged cross-wise between the walls. <IMAGE>
