Abstract (en)

An adjustable system for counterbalancing hinges includes a first member (101) and a second member (102), pivotally connected to each other, a mechanism (104,105,106) including a member (106) movable in accordance with the hinge opening angle, an extendible member (22) including a helical spring (23) subjected to compressive stress, the extendible member being connected with the movable member (106), a cable (24) having an end fastened to the end of the extendible member (22) opposite to the one connected with the movable member (106) while the other end of the cable is fixed to the first member (101), and adjusting means (31,32) acting on the cable (24) and aimed at changing the compressive stress on the spring (23). <MATH>
