Abstract (en)
[origin: EP0692688A2] A domestic cooling appliance, with a thermally insulated housing, has a cover (30) at each connecting point (21) carrying the vapour cooling agent of the evaporator (18) in the coolant circuit, as a seal against the aggregate condition of the coolant. It is coupled to a piping (35), with a structured flow action, for expanding vapourised coolant to be passed to the outer atmos. of the appliance (10). The piping (35) is of polyamide, and the cover (30) is of foamed polyethylene with a closed-pore structure. <IMAGE>
