Abstract (en)  
[origin: EP0692847A1] An electrical connector has an outer housing (1) and an inner housing (2). The outer unit is formed with internal guidance surfaces and a profiled toothed rack section (22). This is engaged by a lever (15) that also has a toothed profile (19, 20). The inner housing can only be inserted provided that it is correctly orientated and the lever is correctly positioned. Once inserted the lever can be moved to an interlocked position. <IMAGE>
