Abstract (en)
[origin: GB2276883A] An optical material comprises laminae of an aligned chiral liquid crystal or chiral liquid crystal polymer (1) which is a solid at room temperature, and a light transmissive medium such as nail vanish (2). The may be constituted by layers of a chiral liquid crystal polymer on flakes of a different material such as a polymer or aluminium. The material may be used in, cosmetics, paints, and inks for security marking documents. <IMAGE>
