Abstract (en)
[origin: WO9424389A2] The proposal is for scaffolding with a rear rail, a vertical scaffold pole, a wedge having a bearing edge and a longitudinal slot running obliquely thereto and serving to clamp the rear rail and two brackets fitted on the vertical scaffold pole at the desired height for the rear rail, whereby a pin passes through the ends of the brackets and the longitudinal slot in the wedge and clamps the outer end of the rear rail between the brackets, in which between the wedge (4) and the rear rail (2, 3) there is a connecting member (10) which can be moved in a direction perpendicular to the axis of the rear rail (2, 3) and lies flat against the bearing edge (14) and the rear rail (3).
