Abstract (en)

[origin: CH684528A5] The description relates to a process for producing printed smart cards in which a plastic substrate is printed by u/v offset printing using u/v inks to form labels and dried. The finished labels are inserted in a mould in which they are made into a composite material by means of a second plastic. A chip is then inserted, thus producing a smart card printed on at least one side. The process is applicable to in-mould labelling (IML).
