Abstract (en)  
[origin: EP0693267A1] The ring (28) fits onto the edge (26) round the top opening (50) of the mug (12), and has inner elastic locking members (36), by which it engages in an inside undercut (20) at the edge. One or more elastic outer locking members (38) on the ring engage in an external undercut (24) at the edge, and a handle (46) for the mug can also be provided on it. The outer locking members can slope inwards and upwards, roughly at right angles to the undercut. They can be evenly spaced round the periphery. The portion (34) of the ring extending over the mug top edge can contain openings outside the outer locking members in the radial direction, and which are at least as large as the members when seen in plan view. <IMAGE>
