Abstract (en)

[origin: EP0693306A1] Process to recycle waste materials by bringing them directly, along with at least one additive material contg. a glass or ceramic forming combustible substance, into the flame of a burner operating with oxygen or a gas contg. a higher amt. of oxygen than air. A combustion gas and molten combustion particles are formed, which are transformed in subsequent cooling into a glass like and/or basalt like and/or ceramic like mass. The waste materials are mixed with the combustible substance to a mixt. of mixing ratio 20-40 to 40-80 wt.%, and the mixt. is burnt in the flames at 1250-1500 deg.C and ambient pressure.
