Abstract (en)  
[origin: DE19521976A1] The transport system has the transposition device arranged between two work stations (10, 11) to carry out a multi-axis workpiece movement is a feeder mechanism (15). The feeder mechanism includes a transport arm (19) for the direct transfer of a workpiece (14) between two work stations without a rest interval. The feeder mechanism has a pivoting device (18) which executes the necessary alteration in the position of the workpiece as it is transferred to the next work station. The feeder mechanism can be a telescopic feeder, a linkage arm feeder or a parallelogram feeder.
