Abstract (en)

[origin: EP0693353A1] The basic mixture is produced dry at a central point (1) and then transported (7,8,10) to a distant point (11). Here in a buffer store colour pigment, additive etc. is mixed dry (6) with it, the basic mixture being delivered in a mixing vessel or transferred to one. The coloured mixture is then delivered for use on site. Before the mixing operation, free-flowing carrier material can be mixed with the pigment or additive. Sand free pulverised stone can be used as the carrier material. Pigment etc. and carrier material can be mixed in a proportion of 1:5. <IMAGE>
