Abstract (en)
[origin: EP0693381A1] The present invention provides a sheet convey apparatus comprising a belt-shaped convey means for supporting and conveying a sheet, and an absorbing force generating means disposed within the belt-shaped convey means for causing the sheet to be absorbed to the belt-shaped convey means. Wherein at least one of portions of the belt-shaped convey means and the absorbing force generating means contacted with each other is made of synthetic resin material having frictional coefficient μ smaller than 0.4 ($\mu \leq 0.4$) and water-absorbing rate A smaller than 0.4% ($A \leq 0.4\%$). <MATH>
