Abstract (en)
[origin: EP0693443A2] The rectangular skip is open to the top and has a pair of lifting stubs (10) on each of the long sides. These are gripped by the conventional lifting slings attached to the lifting arms to transfer the skip between the vehicle and the ground. Two parallel hollow ducts (11) along the length of the base provide a grip for the forks of a fork lift truck. The skip has vertical end faces and has a length not greater than the width of the transport vehicle. This allows it to be stacked on the vehicle alongside similar skips. Additional grips on the end faces allow the skip to be gripped by hooked ends of lifting/tipping arms. <IMAGE>
