Abstract (en)
[origin: WO9423624A1] Infuser units of the teabag type are known to present the problem of giving off a small quantity of liquid after use in a cup, whereby they are difficult to dispose of at the table. According to the invention the units are made with an oblong shape and housed in an oblong casing of a watertight material. After use, the unit can be replaced into the casing, and the mouthing portion of the latter, alone or together with the top part of the infuser unit, can be folded so as to make it possible to place the combined unit on the table without any outflow of liquid.
