Abstract (en)

[origin: WO9424259A1] A known problem with hygienic cleaning sprays is the formation of airborne irritant droplets, either as a direct result of spraying a fine mist or due to the impact of a jet on a hard surface. The user is often advised to spray the product onto a cloth for subsequent application onto the surface. Use of a cloth or sponge in this manner detracts from the convenience of using a spray. By including surfactant in the product and using a spray head which contains a plurality of apertures disposed so as it is possible to produce a spray of foam droplets rather than produce a jet, mist of droplets or aerosol. Accordingly, the present invention provides an aqueous, liquid, hypo-chlorite-containing cleaning composition comprising, 0.05 % wt - 3.0 % wt aqueous alkali metal hypochlorite, 0.1 % wt - 5.0 % wt of a hypochlorite-stable surfactant, said composition being packaged in a container adapted to produce a spray of foam droplets.
