Abstract (en)
[origin: WO9320472A1] Display apparatus comprising a generally transparent injection moldable plastic substrate, a dichroic coating associated with the substrate, a solid state image generator operatively associated with the substrate and the dichroic coating, such that the image generated by the solid state image generator in a given wavelength range is reflected from the substrate to an observer while light of wavelengths outside of the given wavelength range passes through the substrate to the observer.
