Abstract (en)

[origin: WO9422115A1] A usage control system with contactless automatic recognition of users, especially for spa facilities, lifts and cableways or the like, preferably in conjunction with controllable barriers, in which, in order to demonstrate his entitlement, a user carries a data substrate (1) which can be scanned for its data content, preferably a multi-digit number, which is connected to an energy detection and information transmitting device, e.g. a conductor loop (2), the scanned information being transmitted to a preferably hierarchically constructed computer system which records an individual service rendered and, where appropriate, charges for it.
