Abstract (en)
[origin: WO9424651A1] A simulator assembly having a support member (25) pivotally attached at one end (10) thereof to a mounting (3) to allow pivotal movement of support member (25) about a vertical axis and at least one orthogonal axis, the orthogonal axis being orthogonal to vertical axis. There are also actuators (11) operatively associated with the other end of the support member. In use, the actuators (11) provide the pivotal movement about the vertical axis and the at least one orthogonal axis. A sensory isolation collapsible hood (53) is also provided for reducing visual and audible distractions.
