Abstract (en)
[origin: WO9424733A1] A tool (10) for the termination of insulated wires in electrical connectors having different heights, which tool has means affording adjustment of the spacing between a pressing body (50), accommodated by a splice head, and a retaining body for the connector. The adjustment in height between the bodies is afforded by step adjustment and by an intermediate member (56, 58) affording smaller pitches, and the tool has attachment means for releasably attaching the tool to the retaining body.
