Abstract (en)  
[origin: WO9222190A1] An electron accelerator having a first source (100) emitting an electron beam to be accelerated, and a coaxial cavity (5) defined by an outer cylindrical conductor (10) and an inner cylindrical conductor (20) lying on a single axis (30) and joined by two flanges (15 and 25), wherein the electron beam (1) is injected in the mid-plane (40) which is perpendicular to the axis (30) along a first diameter of the outer conductor (10). The accelerator is characterized in that it comprises a second source (200) emitting an electron beam (2) which decelerates as it passes through the coaxial cavity (5), whereby the electromagnetic field required to accelerate the electron beam (1) from the first source (100) is produced.
