Abstract (en)
[origin: EP0694478A1] The transition in the area of the container corners is formed with a larger radius, than in the area of the sidewalls (3,4,5,6). The different radii (7) located behind each other, merge into each other. The sidewalls extend upwards at an outward angle. An outward directed step (10) is located at the transition from the radius concerned, to the sidewall resp. corner area. The base (2) has a mainly oval cross-section.
