Abstract (en)

[origin: EP0694483A1] The container has a first reservoir (1), containing a liquid product (16), having a distribution orifice (3). A second cylindrical reservoir (7) containing a powder product has a bottom (14) and an opening fixed to the first reservoir. A removable wall (8) seals the opening in the second reservoir. A movable cylindrical piece (9,13) has an external section close to that of the second reservoir interior section. This piece has a limited travel between a first position, in which it is situated beyond the first reservoir, and a second position, in which it penetrates into the first reservoir. The transverse wall of the movable piece (13) constitutes the bottom of the second reservoir and is located, in its first position, at a distance from the opening of the second reservoir equal to or less than its travel. <IMAGE>
