Abstract (en)

[origin: EP0694484A1] The end section (25) of the delivery tube (18), extending into the fluid chamber (22) of the valve body (16), is extended by a plunger (26). This has two sections (27,31), and intermediate cross bores (29,30), which are connected by an axial bore (28). In an intermediate position of the delivery tube, the fluid connection between container interior (13) and fluid chamber of the valve, is interrupted. In open position, when the delivery tube extends further into the container interior, the valve body aperture (23) is bridged by the cross bores and the axial bore, for continuous fluid delivery. <IMAGE>
