Abstract (en)
[origin: EP0694661A1] The rose plate (10) is attached to the end (13) of the lock cylinder (11) so that the cylinder can turn. The cylinder is at right angles to and its end projects from the outer face of the door panel (12). Around the cylinder housing (29) fixed in a coaxial recess (18) in the outer skin (15) of the door is a sleeve connector (16). The rose plate has a projecting circular collar (19) which is positioned in a recess (26) in the sleeve connector. The rose plate is adjusted in position along the cylinder and fixed to the sleeve connector so as to be flush with the cylinder end.
