Abstract (en)

[origin: EP0694827A1] The device incorporates two input levers (17,18) operated by separate cables (34,35), and an output lever (14) with two lateral stops (e.g. 14b). Each input lever is terminated with an engagement tongue (17a,18a) at its free end. A changeover element (15) at the free end of the output lever is pivotable across the direction of its movement, with two recesses into which the engagement tongues enter. The movement of either input lever causes the changeover element to be pivoted so as to release the other input lever. <IMAGE>
