Abstract (en)

[origin: FR2705090A1] Fluid-tight container (3) composed of a lid (4), a receptacle (5) and a clamp (6) joining them together. The receptacle (5) is divided into cells by radial partitions and it encircles the lid (4) whilst being off-centred with respect to it. A rotating seal (23) makes it possible to rotate it and successively to present the cells in front of the lid in order that they can be filled successively. Application to the storage and transport of solid nuclear waste. <IMAGE>
