Abstract (en)
[origin: DE4406028A1] In order to provide a method of this kind which permits continuous sterilization and significantly reduces power consumption, as well as being easily integratable in conventional production processes, the invention proposes that the food is exposed to a high-pressure sterilization in a pressure chamber (10) for a given period of time, the food being transferred during this period of time at least once from one pressure chamber into another pressure chamber (12).
