Abstract (en)
[origin: GB2277302A] A patient hoist has parallel legs 12, 14 which can be splayed by a lever mechanism 50 which is swung about axis 52 by a pedal which is generally parallel to the beam 10 on which the legs are pivoted, and which pedal is rocked about an axis lying parallel to and between the legs so that a pin 46 depending from the pedal moves in an arc lying in a vertical plane to cause that swinging movement. <IMAGE>
