Abstract (en)
[origin: WO9519231A1] This invention is a method of using a heat activatable adhesive for laminating vinyl sheet to wood. The solvent-free adhesive combines a reactive styrene-acrylic latex emulsion and an ethylene-vinylacetate copolymer. After application to the vinyl substrate the adhesive is heat activated at temperatures as low as 160 DEG F (71 DEG C) and the laminate resists 200 DEG F (93 DEG C).
