Abstract (en)

[origin: EP0695521A1] The infrared radiant element (1) incorporates a reflector (4) encompassing two infrared discharge tubes (3) in a housing with a rectangular or circular opening (8). The two tubes have separate controls so that they can be switched on and off and their intensities increased or reduced independently. A computer program allows for differences in length and style of hair in timing the operation of the tubes, according to whether or not a blower is in use and whether special treatment such as perming is called for.
