Abstract (en)

[origin: EP0695690A1] The pressing and packing device consists of several preliminary presses and a central pressing complex. The latter consists of at least two, preferably three, complete press units extending out radially from a central axis (4) and able to turn around this central axis. The press units may be disposed so that the individual press unit is at 120 deg. from the packing point and the reinforcing point. The central pressing complex has in and out transporters (36, 36') which are tangential to the turning circle (6, 6', 6'') of the press units.
