Abstract (en)
[origin: EP0695826A1] A washing machine equipped for drying has a condenser consisting of a hollow body (1), through which damp process air flows through. For cooling purposes, the hollow body (1) is rinsed with water via a connectable valve in the water supply unit (4). A bell (11) with a cylindrical inner wall and a tangentially ending supply nipple (12) is located in the supply (4) directly before the discharge opening into the hollow body (1).
