Abstract (en)

Webs (107) form run-off slots (109) and are joined together by bridging sections. These bridging sections are arranged off centre and displaced towards first and second contact sections (105,106) so the run-off slots have different lengths, forming alternately arranged long and short slots. Two webs may form three slots, connected by two bridging sections which are arranged symmetrically to the longitudinal central axis of the channel. There are supports (115) on the underside of the webs, having a height greater than the contact section width.

Abstract (de)

Es sind Entwässerungsgrinnen bekannt, die eine Abdeckung (30) mit Ausnehmungen (31, 31') aufweisen, welche mittels Befestigungseinrichtungen auf einem im Boden eingebauten Rinnenkörper befestigbar ist. Es wird ein mit Versteifungselementen versehener Abdeckrost (30) vorgeschlagen. Die Versteifungselemente werden durch Noppen (117, 118) und/oder Brückenabschnitte (111) gebildet. <IMAGE>
