Abstract (en)
[origin: EP0696091A2] The socket rail or 90 degree pin rail has front and rear sections, each provided by an insulator block, with both the front and rear part formed from individual modules of a module group in which each module is twice the size of the next smallest module. The assembled front and rear sections are of identical length and are coupled together so that the smaller modules of one section are bridged by the longer modules of the other section, e.g. by arranging their longer and shorter modules in reverse order.
