Abstract (en)

[origin: WO9425558A1] Described are washing agents containing alkali-metal silicate with a molar ratio of alkali-metal oxide to SiO₂ of less than 1, 1 to 10 % by wt. of low-ethoxylated non-ionic surfactant with a mean degree of ethoxylation of 1 to 7 and 1 to 10 % by wt. of high-ethoxylated non-ionic surfactant with a mean degree of ethoxylation of 8 to 20, lipase and, optionally, finely divided hydrated alkali-metal aluminosilicate, anionic surfactants and peroxy bleaches, plus other additives. Such washing agents exhibit improved handling properties while at least retaining their washing performance.
