Abstract (en)

[origin: GB2287256A] A yarn comprising both a continuous filament component (1) and staple fibres (2) is manufactured by an air jet texturing process. The staple fibres are bound undisplaceably into the yarn by the loops on the continuous filaments produced during texturing. Owing to the formation of a suction zone of the airstream directly before the beginning of actual texturing, the staple fibres can be sucked in and can be blended into the interior of the yarn and can be secured firmly in the yarn by the loops. <IMAGE>
