Abstract (en)

A wrapping device (2) presenting at least one seat (9) for receiving a respective packet (4) and traveling in steps along a given path extending through a succession of holding stations (9a) at which the seat (9) is arrested, and wherein at least one heating element (22) is associated with and moves together with the seat (9) along the path; the heating element (22) being a passive element partially defined by a heat accumulating block (24) for receiving heat from induction heating members (30) distributed along the path and each located at a respective holding station (9a).
