Abstract (en)

[origin: EP0696667A1] The profile rail system (1) has a basic part (6) and a part (7) standing vertically and engaging in the seam. Over the vertical part a cover strip (2) grips with two suspended ribs (4) and is secured with at least one screw (14). The vertical part comprises two spaced ribs (10) formed vertically to the floor plate (8), between which a tension component (12) is displaceably held and secured by the screw engaging the cover strip. The ribs have two inwardly extending projections (10a) which have downwardly directed stop surfaces (10c).
