Abstract (en)
[origin: WO9419257A2] A multi-compartment container (1, 2), particularly for food. The container consists of at least two compartments arranged one above the other and containing a main substance (A) and a secondary substance (B) to be added to the main substance at the time of use. The container comprises an essentially horizontal inner intermediate wall (5) and a covering member (3), these elements being stiff, flexible or deformable. Removing the covering member automatically causes the secondary substance to be poured onto the main substance.
