Abstract (en)

[origin: WO9425683A1] The description relates to a device having two posts (2, 3) to be set at a distance apart and a cord (8) extending from one post to the other which can be wound at one end on and off a storage roller (11) at one of the posts (2) so that it can be lengthened or shortened. To attain a substantially uniform raising and lowering of the cord (8), a weight (9) movable only in the vertical direction is housed at least on the second post (3) and the weight (9) is suspended and supported on the cord to be longitudinally movable.
