Abstract (en)

[origin: WO9425760A1] The invention relates to a friction vacuum pump (1) with pump sections of different designs, of which the pump section on the inlet side consists of turbomolecular pump stages (14, 15) and a further pump section of siegbahn stages (16, 17) with spiral grooves (19), whereby the active pumping surfaces of the siegbahn stages are formed by facing surfaces of a rotor disc and a stator disc (16, 17). To simplify the production of such a pump, it is proposed that the stator discs (16) have spiral grooves (19).
