Abstract (en)

[origin: TW226004B] A cutting device for cutting prints in the printing machine, particularly ticket printing machine, which comprises a cutter, which is movable along a guide toward a corresponding stationary cutter; in order to let the prints go through, the cutter has an opening on a open position and cuts at least part of the prints when the cutter is at close position; through an adjustment device, the cutter is movable between the open position and the close position; the device is characterized in: the cutter (22) has at least two guides (38); the two units face each other at a distance and are installed on the other side of the blade(42) of the back cutter (22); the cutter(22) is adjusted into the guide(38); the adjustment device (30) has a rotation frame (52); the rotation frame connects with a rotation shaft (54) on the rotation seat of a cutting device frame; a rotation device transfers the rotation frame (52) from the open position to the close position and from the close position to the open position so as to move the cutter (22).
