Abstract (en)

[origin: WO9426576A1] This case concerns the use of laminates consisting of thermoplastic materials in the manufacture of car bodies/cabins and larger parts of such for vehicles. It is presumed that the application will be performed in one operation, preferably by means of rotational moulding. It is presumed that the materials in the different layers are bound to one another without the use of added adhesives/bonding agents. The application further consists of preferably varying qualities/colours in the different layers of the thermoplastic laminate.
