Abstract (en)
[origin: WO9426586A1] In order to provide a waterborne craft with a buoyancy hull and a passenger position secured thereon, in which the buoyancy hull has rigid support regions running transversely to its longitudinal direction on both sides, the passenger position preferably has a seat and a handlebar, the handlebar is coupled to a steering device for the craft's steering system and holding components are articulated on the support regions so as to accept the passenger's feet and possibly calves, which can be even more easily handled with a simple construction, it is proposed that the passenger position (4) be arranged so as to be movable along the slide guide (7) on at least one slide guide (7) formed on the upper side of the buoyancy hull (1) transversely to the craft's longitudinal axis.
