Abstract (en)

[origin: WO9523828A1] A laminating resin is made from (1) an unsaturated polyester resin, (2) a diacrylate or dimethacrylate of alkoxyated bisphenol-A, and (3) either (A) vinyl toluene, (B) ethylene glycol dimethacrylate, or (C) styrene, divinyl benzene or a combination thereof. The resin achieves excellent laminating resin properties, and is significantly inhibited from emitting volatiles during use. A method of laminating a solid formed body with the resin above is also described.
