Abstract (en)

[origin: EP0698694A1] The fitting has a hollow track (1), which opens forwards, and which accommodates a sliding support for a continuously height- adjustable shower attachment. The support has a holder for the attachment, and contains a locking device. The track is located in the sidewall, and is formed from joining together correspondingly-shaped wall tiles. The track may have a circular, oval or rounded-off, multi-cornered cross-section, and at least one of the tiles may also have an opening in order to allow the insertion and removal of the sliding support.
