Abstract (en)

[origin: WO9419925A1] The invention relates to an apparatus for the planting of tree plants. With a frontal portion (12) of a bucket (10) a planting patch is cleared from humus material and at the same time a scraper blade (30) protruding downwards under the bucket scrapes up a heap of mineral soil (72) below the bucket. After that the bucket is positioned horizontally and a planting device (28) located behind a partition wall (16) in the bucket makes a planting hole (48) in the heap (72) with a mandrel (56). A plant is fed forward to and down into the hole through a hose (52) and finally the earth is pressed together around the plant with a stamp (82, 84).
